

Fuel Consumption Buster

By using synchronising technology and the latest generator sets ABIRD Ltd can design and install a system with the emphasis on reducing fuel consumption as well as reducing emissions and your carbon footprint.

We can achieve this when your site load reduces during the night but requires a peak during the day.

For example your site needs 500kVA Base load supply and only 100kVA supply at night we can utilise a 500kVA for normal working hours and when the

load decreases swap the load on to a 100kVA the 500kVA would go into a sleep mode until the load increases again and we can set this for any time of the day.

On past projects where we have installed this system, we have saved our customers up to 30% in fuel consumption and this reduces the emissions and carbon footprint.

We would be happy to site survey any application and give you a forecast on fuel savings this can also be monitored via the Deep-sea control panel this gives a read out for fuel usage in litres per hour.
